

Tasks

As a user I would like to view the different movies and Tv shows that are available

Done

As a user I would like to search for my favorite Tv show and movie.

As a user I would like to view a description Of the movie and its current rating.

As a user I would like to watch a trailer for a movie or a Tv Show.

Robert

As a user I would like to save the movie to my Playlist to view whenever i liked.

As a user I should be able to create a profile on the web app.

As a user I should be able to select categories that Interest me and get movie recommendations according to those categories.

Caleb

You must consume two APIs The Movie Db and Youtube API.

You must have clearly defined view functions and UrlConfs

Your Template files have to be arranged in a clear manner.

Users have to be authenticated before they go through any feature of your app.

The user must have an avatar and a profile.

The web application should be responsive.
